

Community Alarms plug in to your telephone line and come with a call button that you can attach to your clothing. You can use the button from anywhere in your home or garden to summon help. Telecare can have more sensors than the current Community Alarm system so it can also detect things like:

- Fire and smoke
- Extreme heat
- Carbon Monoxide and natural gas
- Flooding
- Bogus callers

It also has the advantage of being able to monitor movement so it can detect where you are in your home – beneficial if you have stopped moving, have had a fall, gone outside or have been in bed or sitting in a chair for a long period. These are just a few examples of how it can help.
