

It is only when asbestos is moved or damaged it could become a problem. If you think a building material is asbestos - do not panic, just ask us for help. The reality is that the asbestos found in South Lakes Housing properties is very low risk to your health. We have a safety first policy of removing asbestos and we are targeting void properties to eradicate asbestos over time. We carry out surveys to our homes and whenever a tenant ends their tenancy, we take advantage of the opportunity of the property being empty to test whether there is asbestos present. The information we gather is then used to inform maintenance programmes so on occasions we may take out kitchen floor tiles for example in our aim to eradicate asbestos from our homes.
